Editorial

ear readers,

Time has came around for another issue of Combat Flight Simulator 2, "A Magazine For Fellow Enthusiast" with a new format, I hope you enjoy.

In this issue I will be dealing with Seasons in CFS2.
I hope you find it an interesting topic.

I have started to winterise some of the textures needed for a winterised ETO.

Help so you can convert lwd and MR trees for the seasons and also MW_trees to have seasons.

It is very important that you read and understand the batch files operating instructions in particular when using the Converting lwd and MR trees for the seasons batch files.

All links correct at time of writing.

I hope you enjoy this magazine.

SEASONS IN CFS2

There are many texture packs available to download.

The first season texture package I downloaded was the Eastern Front Scenery Project for CFS 2, EFSP1, EFSP2, EFSP3, EFSP4 they are packages that are FS9 TEXTURES CONVERTED FOR CFS2 BY STIZ AND MODIFIED BY AJAX,

GTS PROGRAM BY AJAX also included. GTS is a self installing program, and it was this program that I first started to take look at batch files.

The Freeware textures that are advertised in this issue are:-

"Seasons for CFS2" prepared by simonu

They are packaged in five downloads

From the read me

Seasons for CFS2

prepared by simonu

This texture pack contains ground textures from FS9 modified to be used in CFS2

They should match pretty well to the European texture sets released by STIZ, but the two sets differ slightly.

I am releasing these sets because they blend with my WW1 Western Front landclass scenery

This texture pack contains Autumn (fall) ground textures from FS9 modified to be used in CFS2. Matches the European ground textures released by stiz.

by simonu

catid=45&linkid=4333](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&linkid=4333)

This texture pack contains winter ground textures from FS9 modified to be used in CFS2. Matches the European ground textures by stiz.

by simonu

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&page=10&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&page=10&pp=20)

Seasons for Europe Pack 3 Spring

This texture pack contains spring ground textures from FS9 modified to be used in CFS2. Matches the European ground textures by stiz.

by simonu

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&page=9&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&page=9&pp=20)

Seasons for Europe Pack 4 Hard Winter

This texture pack contains hard winter ground textures from FS9 modified to be used in CFS2. Matches the European ground textures by stiz.

by simonu

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&page=9&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&page=9&pp=20)

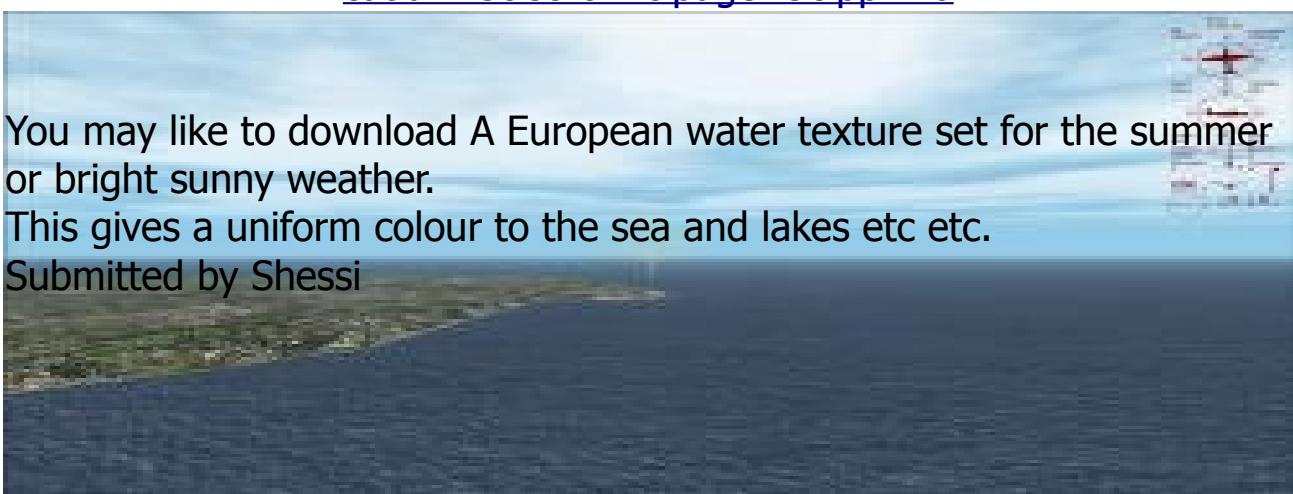

Seasons for Europe Pack 5 Summer

This texture pack contains summer ground textures from FS9 modified to be used in CFS2. Matches the European ground textures by stiz.

by simonu

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&page=9&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&page=9&pp=20)

You may like to download A European water texture set for the summer or bright sunny weather.

This gives a uniform colour to the sea and lakes etc etc.

Submitted by Shessi

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&linkid=4334](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&linkid=4334)

From the read me

Installation.

Follow the suggested method unless you know a better way.

1, place the pack in an addon scenery folder in a location of your choosing.

2,copy the contents of
\Combat Flight Simulator 2\scenedb\world\texture
and paste into \Combat Flight Simulator 2\texture

3,copy \Combat Flight Simulator 2\scenery\worldlc.bgl
and paste a copy into the scenery folder of each season subfolder contained in this seasons pack

Activate the scenery in the scenery library
Start Combat Flight Simulator 2
At the main page go to settings / scenery library
and click add area,
navigate to the cfs2-seasons folder and select one of the subfolders, name the area cfs2-seasons, click ok, before closing the scenery library move the new area down until it is in a layer below the WesternFront scenery and above the Default Scenery layer,

When you want to change from summer to fall or winter
you must do it through the scenery library, open it, click on the cfs2-seasons area and click edit area, you may now select the desired season.

For best results when flying in winter reduce the visibility range so that you can't see the untextured landclass on the horizon.

thanks to Richard Ludowise for showing me the way
thanks to Martin Wright for advice
thanks to the flightsim team
thanks to Bill G
thanks to you

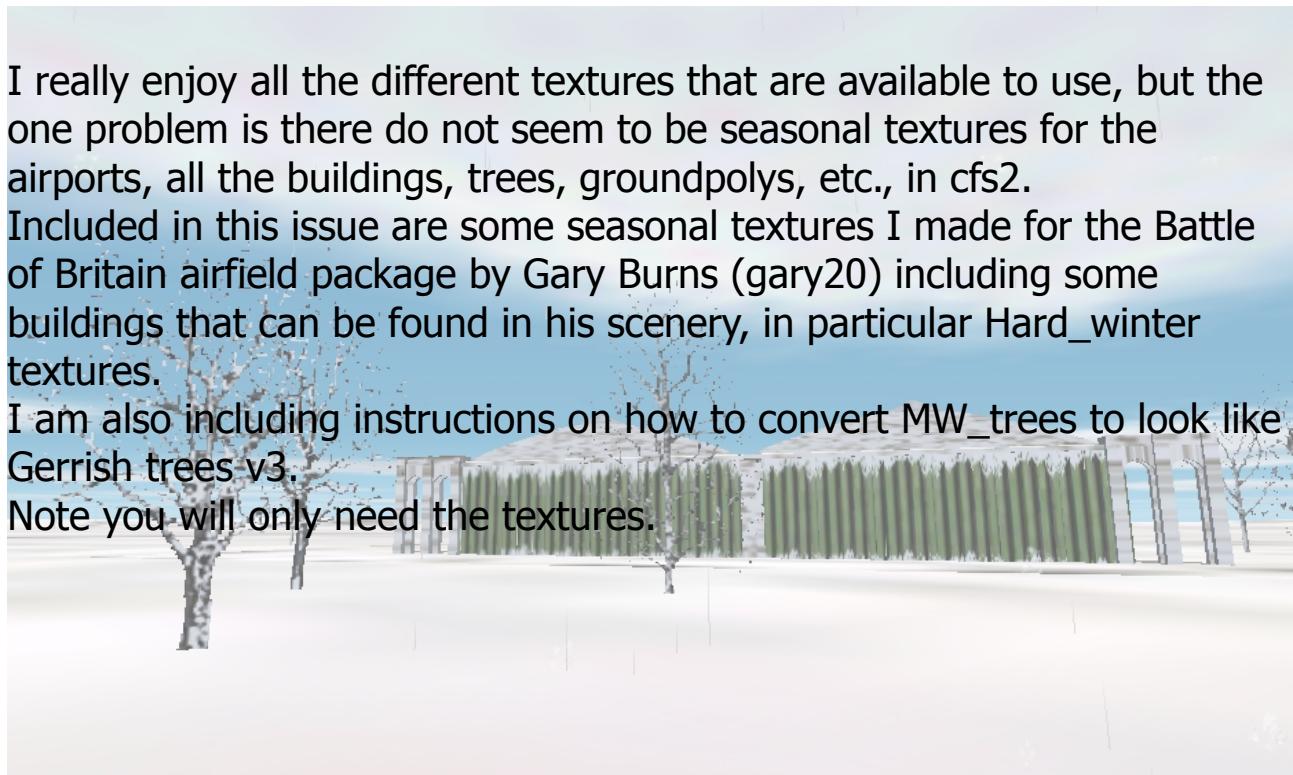

ABOUT SEASONAL TEXTURES

I really enjoy all the different textures that are available to use, but the one problem is there do not seem to be seasonal textures for the airports, all the buildings, trees, groundpolys, etc., in cfs2.

Included in this issue are some seasonal textures I made for the Battle of Britain airfield package by Gary Burns (gary20) including some buildings that can be found in his scenery, in particular Hard_winter textures.

I am also including instructions on how to convert MW_trees to look like Gerrish trees v3.

Note you will only need the textures.

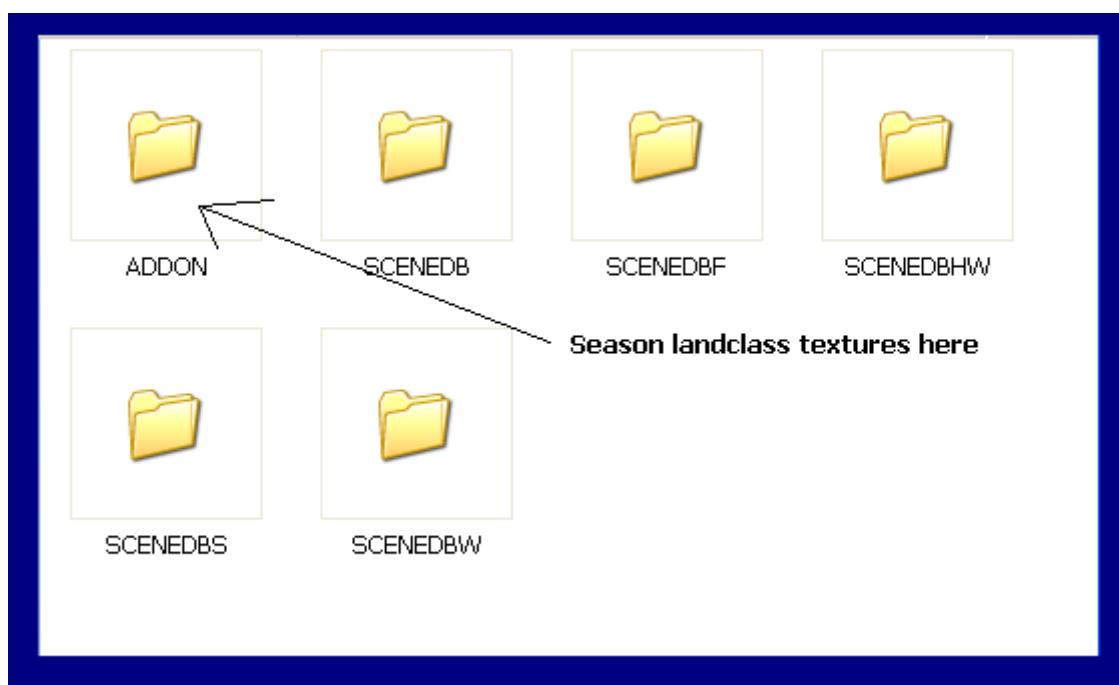

You can download Gerrish,s Trees Library for FS2000/2 Release 3 from here,

http://www.simviation.com/fs2002utilities_ess1.htm

The way I installed my seasonal textures

I installed my seasonal landclass textures in an addon folder which resides outside of my CFS2 root directory. To keep things simple I created four SCENEDB folders for the other scenery's and there textures.

SCENEDB is the other Summer textures.

SCENEDBF is the other Fall textures.

SCENEDBHW is the other Hard_winter textures.

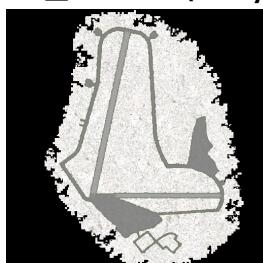

SCENEDBS is the other Spring textures.

SCENEDBW is the other Winter textures.

Copy the contents of your game SCENEDB folder into all the SCENEDB**'s folders.

Inside each SCENEDB.** Seasonal textures that are associated with CFS2BoB or other scenery's are placed into there texture folder that resides within them.

Inside my SCENEDBHW\CFS2BoB snowed in folder I placed just for fun ground textures with the runway and paths covered with snow which is included in this issue. Below are two textures showing Biggen Hill in Hard_winter\Very Hard_winter.

Runway and Paths cleared

Runway and Paths covered with Snow.

Remember to set the correct paths in your scenery .cfg file before using.
ie.

```
[Area.xxx]
Title=CFS2BoB
Local=C:\Program Files\Microsoft Games\CFS2
Scenery\Scenedbf\CFS2BoB
Remote=
Active=TRUE
Required=TRUE
Layer=xx
```

Screenshots of tree_irreg.bmp

Illustration A: tree_irreg

Illustration D: tree_irreg_fa

Illustration B: tree_irreg_hw

Illustration E: tree_irreg_sp

Illustration C: tree_irreg_wi

To convert Gerrish trees to MW_trees

Make a folder and name it Gerrish Trees to MW Trees.
Inside this folder make seven folders and name them as in the
Illustration F: Tree converter.

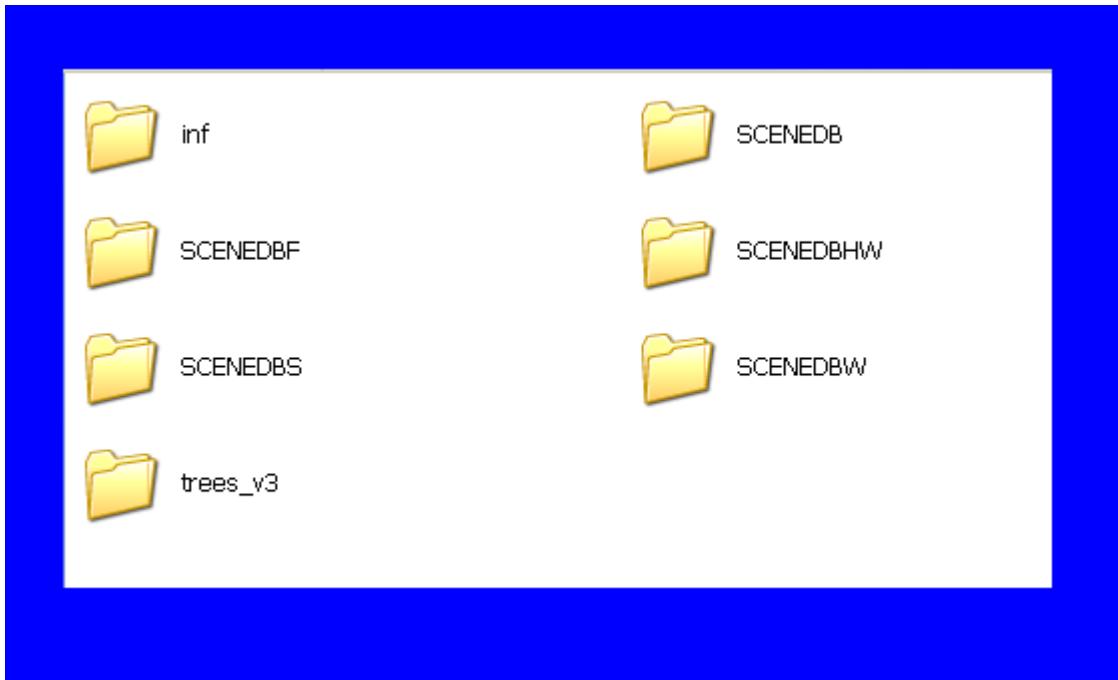

Illustration F: Tree converter

Place inside the trees_v3 folder the trees_v3.zip file, and Extract to folder.

Inside the inf folder make a texture folder and place all the .bmp's only from the trees_v3 folder inside the texture folder.

Copy and paste the inf folder and all the contents into all the SCENEDBS*'s folders.

Inside this issue there are five batch files they are called:-

- | | |
|-----------------------|---|
| 1. TREES FALL. | Place inside SCENEDBF |
| 2. TREES SPRING. | Place inside SCENEDBS |
| 3. TREES HARD_WINTER. | Place inside SCENEDBHW |
| 4. TREES WINTER | Place inside SCENEDBW |
| 5. TREES SUMMER | you may like to change the Summer tree textures too. |

Place each batch file into the texture folder in all of the SCENEDBS*'s folders, double click each batch file that are in there respective folders and you will end up with eight mw_trees, there names will be:-

mw_tree_0, mw_tree_1, mw_tree_2, mw_tree_3, mw_tree_4,
mw_tree_5, mw_tree_6, mw_tree_7.

OTHER OBJECTS TO WINTERISE

In CFS2 there are many objects etc. that still needs to be winterised. I have included in this issue a few, I hope there are a few members of the community that can help set up a project to achieve more of this. It must be remembered that when adding Snow to objects, areas of that object may get covered with snow that won't normally get covered, it is the texture artist that will have to make the compromise what is going to work best. I am only displaying Euro and EURO Hard_winter textures.

Alternate textures for the stock CFS2 for **infrastructure large hangers** **by PSULLYKEYS**

Another outstanding freeware addon for CFS2

This package contains all fifteen of the alternate texture uploads for the stock CFS2 infrastructure large hangers, as well as other objects in the

package.

These were made from stock CFS2 textures. there are 4 versions of the 3 large hangers: Pacific, European, Euro-Winter, Desert. Included are the INFO folder pix to replace the originals. (Except Pacific Theater)

by psullykeys

You can download the package from here:-

Psullykeys_inf_retex.zip

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&page=11&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&page=11&pp=20)

inf_retex_01: Alternate textures for the stock CFS2 infrastructure large hangers. These were made from stock CFS2 textures.

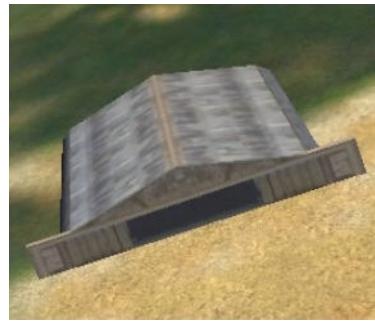

Please read all the original read me_tx in every folder.

This compilation is to give an easy to view article about winterising Europe.

Snow

inf_hangar_largea

inf_hangar_largeb

inf_hangar_largec

Eur

Alternate textures for the stock CFS2 infrastructure large hangers. These were made from stock CFS2 textures. there are 4 versions of the 3 large hangers: Pacific, European, **Euro-Winter**, Desert.

Included are the INFO folder pix to replace the originals.(Except Pacific Theater)

Description: I thought the originals were a bit too dark, standing out

too much, and one of the hangers was bamboo/palm and didn't work at all in other than the Pacific Theater.

- 1)The Pac version is merely softened and I've added a few small details, like removing the aircraft visible in the hanger.
- 2) **The Eur** has some texture changes, especially the roof instead of palm/bamboo.
- 3) **The Euro winter is a snow covered version of Euro.**
- 4) The Desert version was yellow/orange tinted to blend better in desert scenery - where dust/sand covers everything.

Installation Instructions:

The textures replace the original textures in the SCENEDB/INF/Texture folder. >>Back up your original ones!!!<< You may only use one of the choices for each large hanger in one version of CFS2.

The Info pix replace the originals in the INFO folder....>>Back up the originals!!<<

DAMAGE TEXTURE: Textures found in the SCENEDB/INF folder... Since the originals are used, if you have a non Pacific Theater type version, hanger large 2 was originally a bamboo construction and uses the inf_damage_grd_bamboo_lg.bmp as the source. It has green in the format. I suggest you copy the inf_damage_grd_conc_lg.bmp and rename it inf_damage_grd_bamboo_lg.bmp. The destroyed structure will look more realistic. >>Back up your original!!!<<

"NOTE" Available inf_retex_14

This is freeware made using stock CFS2 textures, some paint and sweat!! Enjoy!!! Don't use in payware without written permission of the author. I'm not responsible for any problems encountered.

Thank you for the support from the SimOuthouse CFS2 forum.

PSULLYKEYS 1/14/07

inf_retex_02: Alternate textures for the stock CFS2 infrastructure inf_fortified_cave_entrance. These were made from stock CFS2 texture.

ALL inf_fortified_cave_entrance

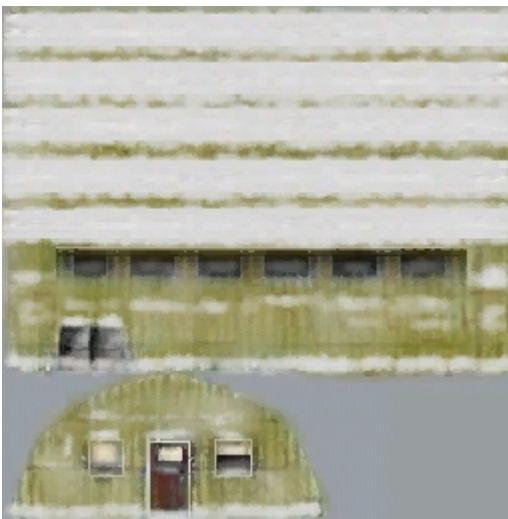

ALL

new "exploding" DP file included with this package.

inf_retex_03 Alternate textures for the stock CFS2 infrastructure barracks and medium hut. These were made from stock CFS2 textures.

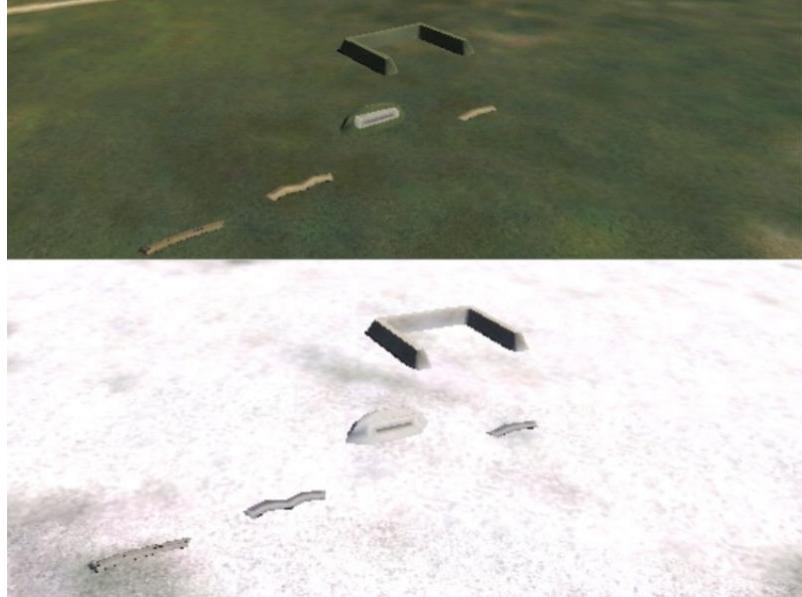

Eur_OD is an olive drab version of barracks2 which is a quonset hut as used in the UK at bomber bases as described in a few books I've read.

Screenshot showing OD texture sheet.

inf_retex_04: Alternate textures for the stock CFS2 infrastructure foxholes,ground fringe,large pillbox and aircraft revetment . These were made from stock CFS2 textures.

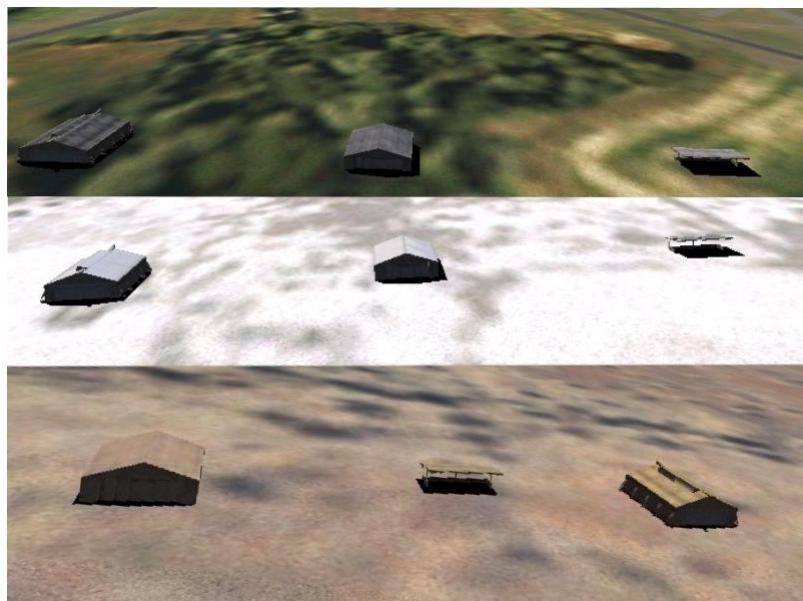

The Eur has a grassy revetment, ground fringe and large pillbox. The foxholes are dirt.(in moderate climates,any dirt becomes weeds pretty quickly if you have rainfall!)
The Snow are snowy versions of the dirt texture softened originals.

“Craters1,2 & 3 could not be converted, and the mask appears even in the original version!!??”

**“I may have a go soon”
Robert John.**

inf_retex_05: Alternate textures for the stock CFS2 infrastructure small hangers. These were made from stock CFS2 textures.

The Eur has some texture changes to look more European. The Snow is a snow covered version of Eur.

Included are "Russia" and Snow versions of Barracks 1 not included in my inf_retex03 that Achim at SOH indicated does not look out of place.Thanks Achim!

Bar1 Russia folder contains barracks 1 in regular and snow versions suitable for the Ost Front. USE FOR EUR.

The Eur has some texture changes to look more European. (inf_retex03) The Snow is a snow covered version of Eur.

inf_retex_06: Alternate textures for the stock CFS2 infrastructure small buildings. These were made from stock CFS2 textures.

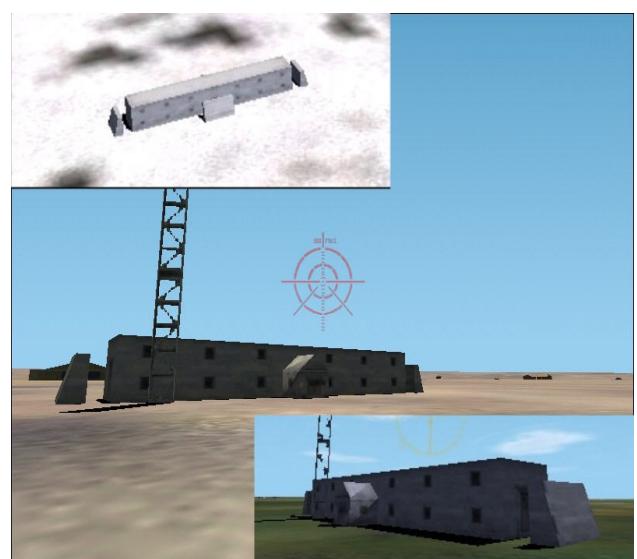

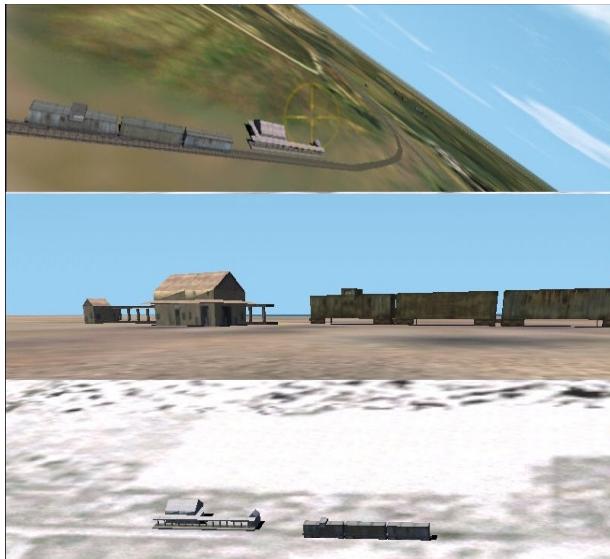

The Eur has texture changes to look more European. The Snow is a snow covered version of Eur.

"TowerWith"=Building, RAF Watch Office

"TowerWithout"=Building, RAF Watch Office

ABOUT

Gary20's wonderful BritObj.bgl (BoB Package) and the RAFLib.bgl (RAF Building Object)

As you can see in the pictures in the Winterising BoB Objects section the TowerWith and the TowerWithout looks as if they are the same object sharing the same texture mapping, but they are not, they are separate models .

When you load the "**BoB airfield package**" followed by **GSL_RAF_Buildings** everything may seems to be OK. But in the inf texture folder Tower1.bmp gets overwritten by Tower1.bmp from the GSL_RAF_Buildings.

A thread I posted

I can remember posting a thread at SOH CFS2 Discussion about Tower with and Tower without.

It seems when you load BritObj.bgl found in the BoB package followed by RAFLib.bgl found in GSL_RAF_Buildings, Tower1.bmp from the BoB package gets over written by Tower1 of the GSL_RAF_Buildings.

It makes a mess of the tower and I cannot remember how I sorted it out. I have been playing with CFS2BOB order in the scenery library but no luck. I think I replaced the over written bmp with the one that came with the BoB package, I have not thought about this for some time since I have been using the TAF_G20OBJ_Update and then having to find the oiltank.

Anyway I decided to do a little experiment with .bgl names and found that if I change RAFLib.bgl to ARAFLib.bgl The correct object I want with its correct textures are there.

So I think you can have the same LibObj(NAME "xxxxxx") in two .bgl's and the one you would like to show should come first alphabetically. This could be interesting to designers making addons.

Robert John

I have included in this magazine two new Brit objects with new objid and LibObj(NAME "xxxx" they are "Towerwith_OLD" and "Towerwithout_OLD" in a bgl called "tower_OLD".BGL.

I have renamed the textures so now they are more unique,
In Mission Builder Objects by Stephen Barstow a.k.a Stiz the Roof
texture overwrites the Tower's roof texture.

The names of the renamed textures are as follows:-

1. RoofA.
2. Tower1A
3. Tower2A

I have renamed the DP's to suit the new names.

Reply to thread

The B24 Guy

Hi Guys,

If I remember right. Sometimes the sim calls the object by it's "name" and sometimes by it's "id number". I think it depends if it is in the GSL layer or added as a Mission Builder object.

I think the GSL calls for the ID and the Mission Builder calls for the name.

Regards,
B24Guy

TAF - Gary20 BGL Update Pak

TAF - Gary20 BGL Update Pak

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&sort=h&pp=20](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&sort=h&pp=20)

A set of 26 replacement BGL's for Gary20's wonderful BritObj.bgl (BoB Package) and the RAFLib.bgl (RAF Building Object) to fix several issues with the old ones. Plus two new C-Type Hangars by Gary in his FSDS Package. All recreated in GMax and optimized for better FPS.

Screenshot of TAF - Gary20 BGL Update Pak objects.

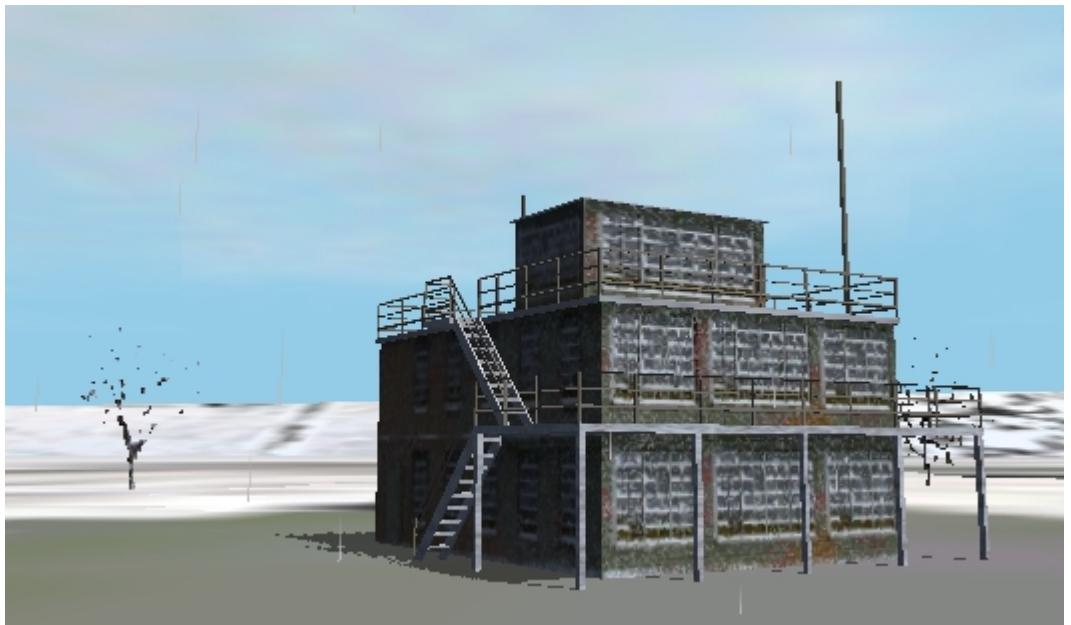

If you install this package you may find you will have a missing object, it is an **oiltank** so I also included the oiltank that I cut and pasted and made into a .bgl to make it easier for you to use this update. You can also use any oiltank by using GSLEdit to replace this object with another, or just delete from the gsl scenery.

There are many reasons why I think it is best to use this replacement package,

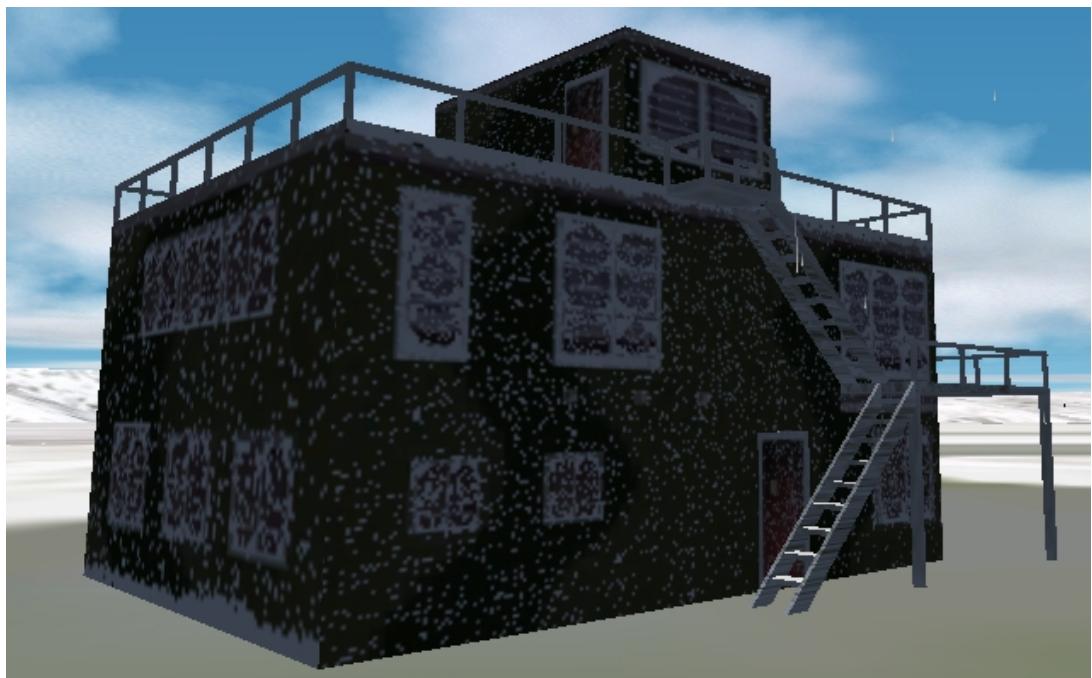

One is it can help stop any confusion with different objid's and objects with the same name.

Do not mix BritObj.bgl and RAFLib.bgl with TAF - Gary20 BGL Update Pak in any installation.

It may be safe to remove these textures, MobStore-748-39back.bmp, MobStore-748-39front.bmp, MobStore-748-39roof.bmp, MobStore-748-39side.bmp. DON'T FORGET ALWAYS BACK UP JUST IN CASE SOMETHING GOES WRONG.

GSL_RAF_Building : "TowerWith" with snow textures
TowerWithout is similar

"BoB airfield package" : "TowerWith" with snow textures
TowerWithout is similar.

Also similar to the one included with this issue.

Europe textures for CFS2 stock buildings

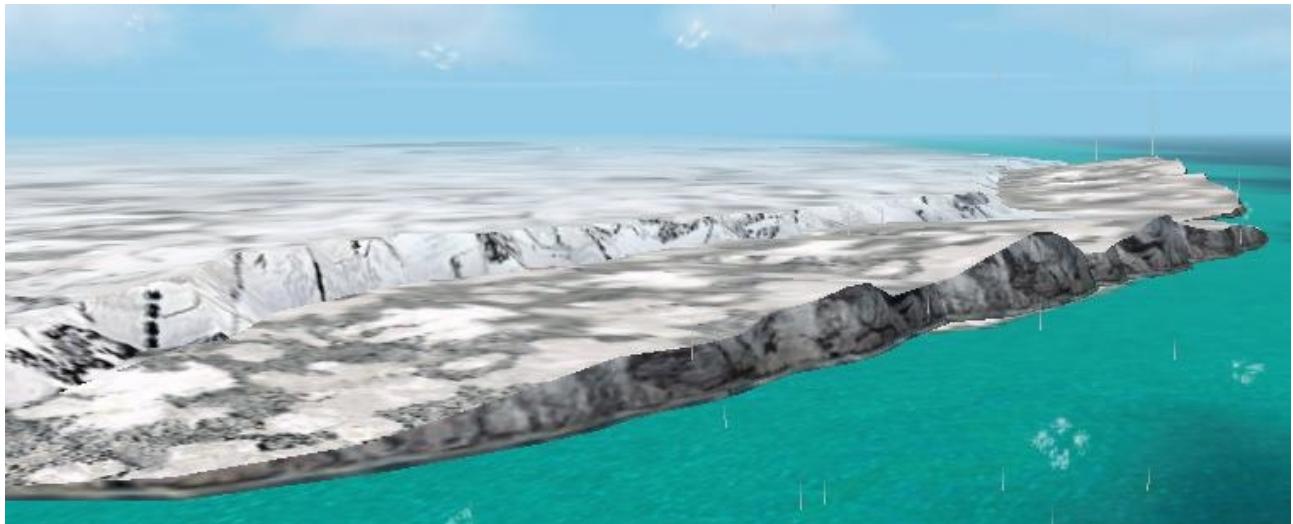

These are 22 of the stock CFS2 buildings repainted in hi-res to use in the European Theater. A correction had been made for this package, adding textures for inf_stone_building_2 and inf_wharf.

Download Europe textures for CFS2 stock buildings.zip

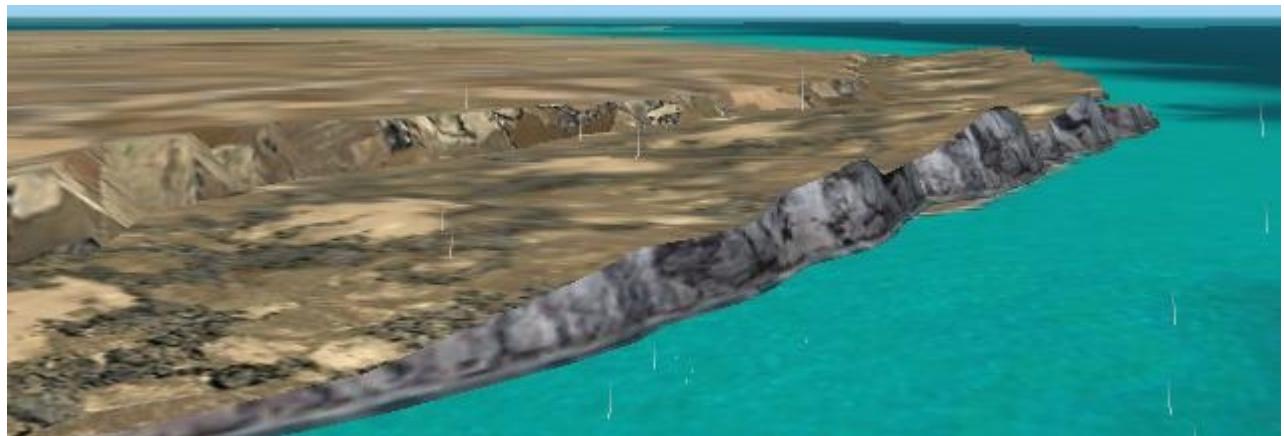

[http://www.sim-outhouse.com/sohforums/local_links.php?
catid=45&linkid=12690](http://www.sim-outhouse.com/sohforums/local_links.php?catid=45&linkid=12690)

These textures are very good to use in your summer ETO inf texture folder, although I have winterised some of the textures that came with the BoB airfield package and the GSL_RAF_Buildings, the snow textures from the alternate textures for the stock CFS2 for infrastructure by PSULLYKEYS are very good.

SOME SCREENSHOTS OF MY WINTERISING TEXTURES

Above screenshots are of the new model that is included in this issue.

Converting lwd and MR trees for the seasons

If you would like to convert the objects below for your own **personal** use please follow the instructions carefully.

Although some trees may not look as they do in nature they will appear to have seasonal change.

What would be nice is to have all the wonderful trees used in cfs2 seasoned textured from the start, but as there is properly not a huge call for them, also it would also be a considerable amount of work, this is a work around.

You may already have these downloads installed, if you have you can either download again and just use the textures or you can find all the textures using the list below* from my cfs2 install. The list is also enclosed within the magazine (LWDtrees.txt).

You will need to register for an account at lwdesigns.com.au and login.

*You will need all the objects listed on pages 42 to 45.

STEP 1

Next make a temporary folder and unzip all download packages into this folder. Name it my temp. You will have six folders:-

1. MR_Tree_Package.
2. LW_Library_Objects.
3. lwd_tree_library.
4. LDW_Trees.
5. ldw_treelib.
6. LDW_Trees_Pro.

STEP 2

Inside your temporary folder make a folder and call it My Textures.

Open up MR_Tree_Package and chose a texture pack, tree_textures_512 or tree_textures_256 and unzip. Open this folder and Edit, Select All, copy and paste the contents inside My Textures folder

STEP 3

Open up LW_Library_Objects, and inside this folder is a SCENEDB folder, and inside the SCENEDB folder there is an inf folder, and inside the inf is a texture folder, Copy the contents of this texture folder and paste it into the My Texture folder. Confirm file replace Yes to All.

STEP 4

Open up lwd_tree_library, and chose a texture pack LWD_TreeLib_textures_512 or LWD_TreeLib_textures_256.

Open the chosen folder and Edit, Select All, copy and paste the contents inside My Textures folder.

STEP 5

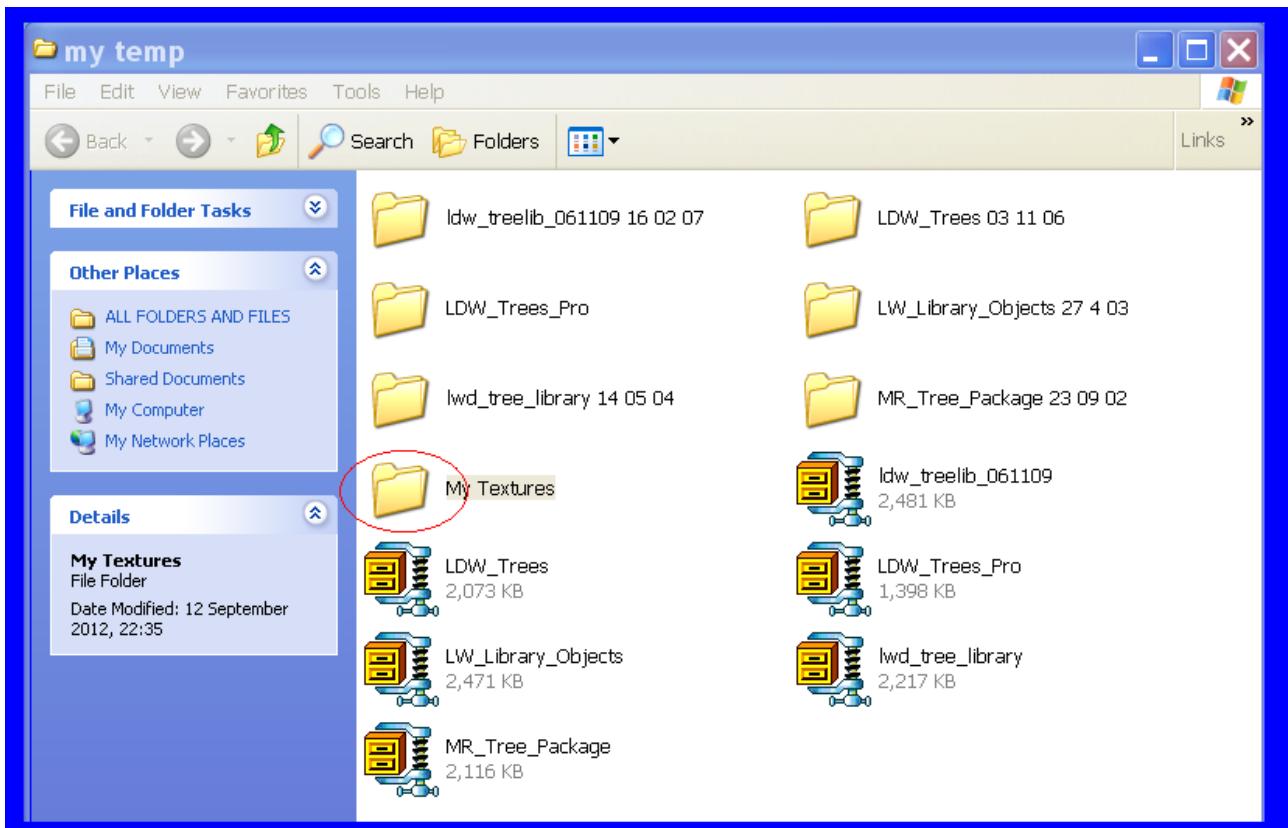

Open up LDW_Trees, inside this folder there is an inf folder, and inside the inf folder is a folder called textures. (*if you were to install this folder into your game the folder would have to be re-named texture*) Copy the contents of the textures folder and paste it into the My Texture folder.

STEP 6

Open up ldw_treelib_061109, inside this folder is a folder called LDW_TreesLib_061109, and inside this folder is a SCENEDB folder, and inside the SCENEDB folder there is an inf folder, and inside the inf is a textures folder, (*if you were to install this folder into your game the folder would have to be re-named texture*) Copy the contents of this texture folder and paste it into the My Texture folder. Confirm file replace Yes to All.

STEP 7

Open up LDW_Trees_Pro, inside this folder is a folder called LDW_Trees_Pro, and inside this folder is a SCENEDB folder, and inside the SCENEDB folder there is an inf folder, and inside the inf is a textures folder, (*if you were to install this folder into your game the folder would have to be re-named texture*) Copy the contents of this texture folder and paste it into the My Texture folder.

Screenshot showing all files and folders inside your temporary folder

STEP 8

Now make a batch file like the blue text, and place inside your My Textures folder, this will give you a text file naming all the files you have in your My Textures folder. Name the bat file LWDtrees.
Keep the LWDtrees.bat and the text file it produces "LWDtrees.txt" inside this folder.

ECHO OFF
DIR/B/O:N>LWDtrees.txt
EXIT

Batch file included with Magazine.
To run a batch file double click on it.

When you run the LWDtrees.bat the two lines below will also be included in the list above.

LWDtrees.BAT
LWDtrees.txt

These two items will be deleted after running the converter batch files.

You will notice that there are some non tree objects in the list, these will also be deleted automatically when running the converter batch files.

You will need the list from LWDtrees.txt to make the converter batch file.

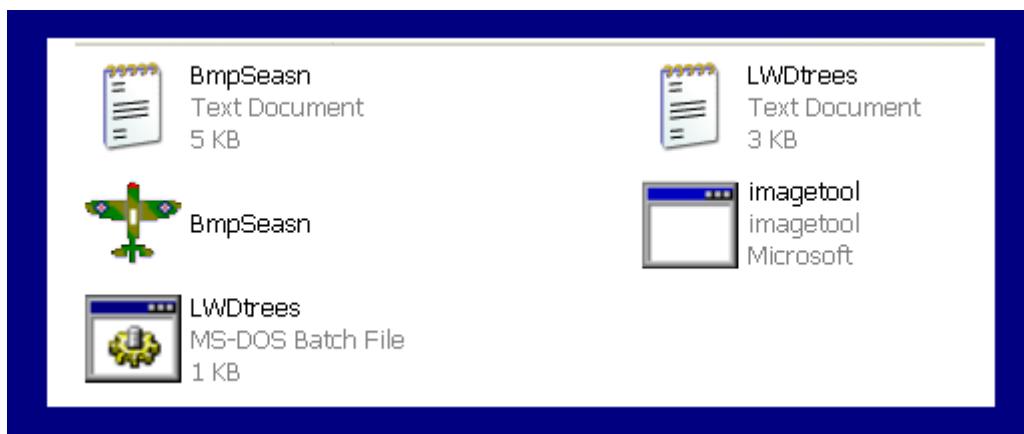

STEP 9

Run LWDtrees.bat and check the list to make sure you have all the textures and when correct use this list to help produce the batch files.

I used a notepad called subpad, it allows you to make columns and is included it with this issue.

Inside the BmpSeason package there is a text file called BmpSeasn, the BmpSeasn program needs this to work and you need it to make the batch file. These need to stay in the My Textures folder.

Imagetool and BmpSeason must also be placed inside the My Textures folder.

Screenshot of the files placed into My Texture folder excluding the image files.

Now make your converter batch files.

Below is a copy of the batch files for Hard_winter.

The text highlighted in yellow are the non tree objects that will be deleted when running the converter batch files.

I made it like this with the hope it would be easier for you.

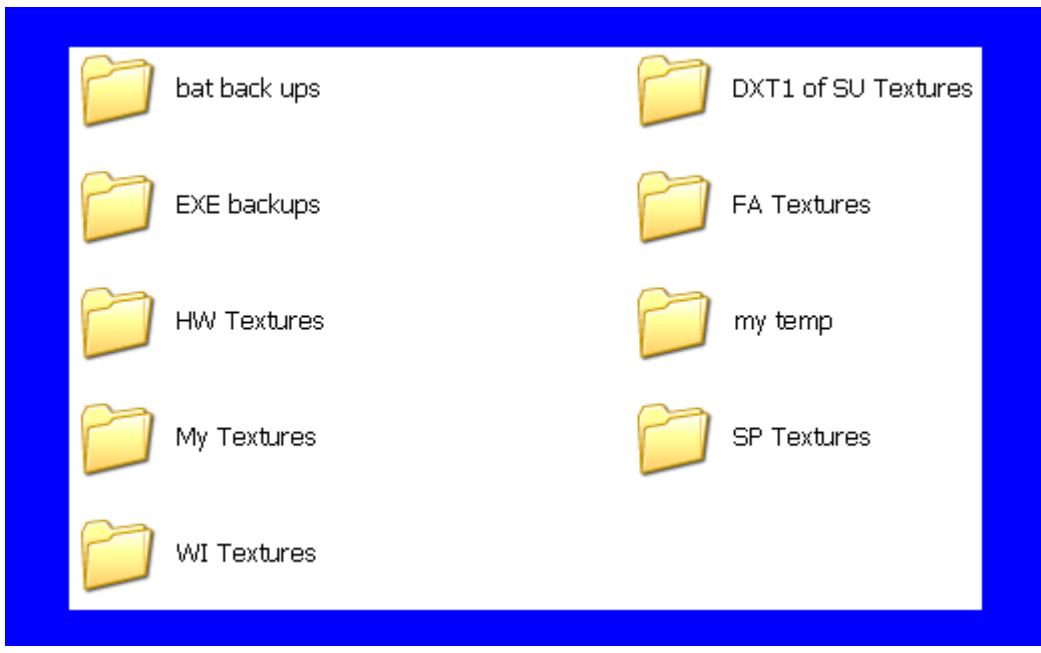

Bath files are included with this issue.

The correct batch files must be placed inside the correct season texture folder. To do this copy and paste My Textures and rename each copy
** Textures.

You will need four folders,

1. HW Textures.
2. WI Textures.
3. FA Textures.
4. SP Textures.

Please note when putting the textures
into the game re-name folders Texture.

Copy of the batch files for Hard_winter.

```

@ECHO OFF
ECHO.
ECHO.          This program will Convert
ECHO.          lwd and MR trees for Hard_winter.
ECHO.
ECHO.
ECHO.
ECHO.          Although some trees may not look as they do in nature
ECHO.          they will appear to have seasonal change.
ECHO.

```

ECHO. Please note that the processes may take several
ECHO. seconds to complete, so please be patient...

ECHO.
ECHO.
PAUSE

Why I think the original textures should be converted to DXT1

Texture question presented to FSDEVELOPER forum.

#1 12 Sep 2012, 08:41
Robert John

Texture question.

Hi all,
The game I design for is CFS2.
I am looking into a problem I observed when objects are textured with dxt3 with alpha, objects behind them disappear. Is it better to use dxt1

with alpha and maybe convert all the dxt3 with alpha textures to dxt1 with alpha.

The objects I am talking about are trees and fences with objects behind them.

Robert John

#2 12 Sep 2012, 11:19

Tejal Bernardo

Something important is to check Z-Test alpha, and the alpha test level to 90 or so, Alpha test mode to GreaterEqual

And in "Enhanced Parameters" Z-Write Alpha. and will desapear that draw order effect.

#3 12 Sep 2012, 13:42

arno

Hi,

Since this is for cfs2 the above suggestions won't work.

I think with cfs2 there is not so much you can do. The drawing order between different objects is determined by the location of the reference point.

It could be that dxt1 textures are sorted differently (not sure since I never developed for it, but other FS versions also did that). So using dxt1 might help, but of course you can't do semitransparent.

Arno

If the world should blow itself up, the last audible voice would be that of an expert saying it can't be done.

Make a copy of My Textures and name it DXT1 of SU Textures and make a converter batch file to convert the textures from dxt3 to dxt1 and name it SU, place su batch file inside of this folder.

Copy of the batch files for DXT1 SU Textures.

SU .BAT

```
@ECHO OFF
ECHO.

To save you a lot of work all batch files are pre-made and are included in this issue.

White cliffs of Dover

I have included a new model of the white cliffs of Dover.
It has lod's and all are textured.
It has a viewing distance of 30000 m.
The ground uses the landclass textures and the cliff uses the mark_2.bmp found in the root texture folder.
The model is in the WHITECLIFFS.bg and is placed into your root scenery folder.

If you have CFS2BoB installed and you would like to use this model follow install instructions below.

You will have to remove the Dover_INF.bgl from the CFS2BoB\scenery folder, and the landmark.bgl from the inf\scenery folder, you will also have to remove the mark_2.bmp from the inf\texture folder.

The DOVER_WHITECLIFFS.bgl is the placement bgl and has a built in flattening switch, it is placed in the CFS2BoB\scenery folder.
Delete the FILELIST from the CFS2BoB\scenery folder the inf\scenery folder and also the root scenery folder.

About the folders included in this issue

There are thirteen folders and one file included with this issue.

1. tower_OLD model.

Contains the model with re-named textures of the tower found in the "BoB airfield package".

2. Tower_old_Hard_winter.

Contains winterised textures for the above object.

3. scenery.

Contains a new model of the white cliffs of Dover (WHITECLIFFS.bgl)

To be placed into your root scenery folder.

4. inf.

Contains the missing oiltank if you have installed the TAF - Gary20 BGL Update Pak.

Copy this folder into all the SCENEDB** folders.

5. CFS2BoB.

Contains the DOVER_WHITECLIFFS.bgl which is the placement bgl for the whitecliffs of Dover and copy this folder into all the SCENEDB** folders.

6,7,8,9,10.

All the SCENEDB**'s folder, must be added to your game SCENEDB**'s folders when all installations are complete.

11. Tree .BAT files.

Contains the batch files to convert Gerrish trees to MW_trees.

12. ALL FOLDERS AND FILES FOR SEASON CONVERSION.

Contains the batch files to convert lwd and MR trees for the seasons.

13. subpad.

subpad - the basic notepad clone.

14.LWDtrees.txt.

A text file you may need to check you have all the textures.

You will need to know away on how to use the seasonal folders.
In the next issue I will show you a way to do this and produce more
seasonal textures.

Below is an example of a file swapping interface.
